## Volunteer Thank You

Thank you for taking the time to volunteer for a *FIRST®* Tech Challenge event. *FIRST®* and *FIRST®* Tech Challenge rely heavily on volunteers to ensure events run smoothly and are a fun experience for teams and their families, which could not happen without people like you. With over 5,500 teams competing yearly, your dedication and commitment are essential to the success of each event and the *FIRST* Tech Challenge program. Thank you for your time and effort in supporting the mission of *FIRST*!

## Introduction

---

### **What is FIRST® Tech Challenge?**

FIRST® Tech Challenge is a student-centered program that focuses on giving students a unique and stimulating experience. Each year, teams engage in a new game where they design, build, test, and program autonomous and driver operated robots that must perform a series of tasks. To learn more about FIRST® Tech Challenge and other FIRST® Programs, visit [www.firstinspires.org](http://www.firstinspires.org).

### **FIRST Core Values**

We express the FIRST® philosophies of *Gracious Professionalism®* and *Coopertition®* through our Core Values:

- **Discovery:** *We explore new skills and ideas.*
- **Innovation:** *We use creativity and persistence to solve problems.*
- **Impact:** *We apply what we learn to improve our world.*
- **Inclusion:** *We respect each other and embrace our differences.*
- **Teamwork:** *We are stronger when we work together.*
- **Fun:** *We enjoy and celebrate what we do!*

## **Gracious Professionalism®**

---

FIRST® uses this term to describe our programs' intent and *Gracious Professionalism®* is not clearly defined for a reason. It has different meanings to everyone. Some possible meanings of *Gracious Professionalism* include:

- Gracious attitudes and behaviors are win-win.
- Gracious folks respect others and let that respect show in their actions.
- Gracious Professionals make valued contributions in a way that is pleasing to others and to themselves.

In the end, *Gracious Professionalism®* is part of everyday life. When professionals use their knowledge graciously and individuals act with integrity and sensitivity, everyone wins, and society benefits.

Watch Dr. Woodie Flowers explain *Gracious Professionalism* in this [short video](#).

### **Gracious Professionalism for Volunteers**

It is a good idea to spend time going over this concept with volunteers. Provide volunteers with real-life examples of *Gracious Professionalism* in practice before, during, and after the event and recognize great *Gracious Professionalism* when you see it in action!

## **FIRST Volunteer Rights and Responsibilities**

---

### **NOTICE OF NON-DISCRIMINATION**

For Inspiration and Recognition of Science and Technology (FIRST®) does not discriminate based on race, color, national origin, sex, disability, age, status as a veteran who served in the military, religion, gender, gender identity, or gender expression in its programs and activities.

Keep updated at: <http://www.firstinspires.org/about/legal-notice>

## Volunteer Rights and Responsibilities

Volunteers are the most valuable asset to FIRST®. Your selfless contribution of time and resources are instrumental in accomplishing our mission of inspiring the next generation of science, technology, engineering, and mathematics leaders and innovators. The foundation of the relationship between FIRST and our volunteers is respect.

### It is your right to:

- Be treated with *Gracious Professionalism*®. *Gracious Professionalism* is a way of doing things that encourages high-quality work, emphasizes the value of others, and respects individuals and the community.
- Feel valued. FIRST recognizes the significant efforts that volunteers contribute. The time that you donate not only helps FIRST succeed but also builds the FIRST community.
- Understand your role. FIRST will inform you about what's expected of you, your schedule, any meals you will be provided, any changes to program or policy, and who to contact should you need assistance.
- Expect a safe environment. FIRST strives to create and maintain a safe environment for all volunteers and participants and will always factor safety into program planning.
- Receive fair treatment and inclusion. All volunteers will be treated with respect and dignity in inclusive environments. FIRST does not discriminate on the basis of race, color, national origin, sex, disability, age, status as a veteran who served in the military, religion, sexuality, gender, gender identity, or gender expression in its programs and activities.
- Reevaluate your time commitment. FIRST appreciates all of our volunteers and understands that volunteers experience life situations that may affect their commitment.
- Communicate with your Volunteer Coordinator or your local FIRST leadership about:
  - Concerns or limitations that are affecting your volunteer role.
  - Any mistreatment towards you or others. You may be required to fill out a [non-medical incident form](#).
  - Contact FIRST Headquarters directly if you feel that you are being treated improperly and attempts to resolve issues and conflicts at the local level are not successful. Volunteers can call (800) 871-8326 or email [volunteer@firstinspires.org](mailto:volunteer@firstinspires.org).

### It is your responsibility to:

- Treat others with *Gracious Professionalism*®.
- Follow the schedule and the role description provided for your position. Contact your local FIRST leadership if there are any issues.
- Respect others, treat them fairly and kindly. Be inclusive and follow the non-discrimination policy of FIRST.
- Follow safety rules and ensure safety of others. Adhere to all [FIRST Youth Protection Program \(YPP\) policies](#). Report any injuries or safety concerns within 48 hours.
- Adhere to the [FIRST Code of Conduct](#).
- Have FUN!

## Tournament Organization Structure

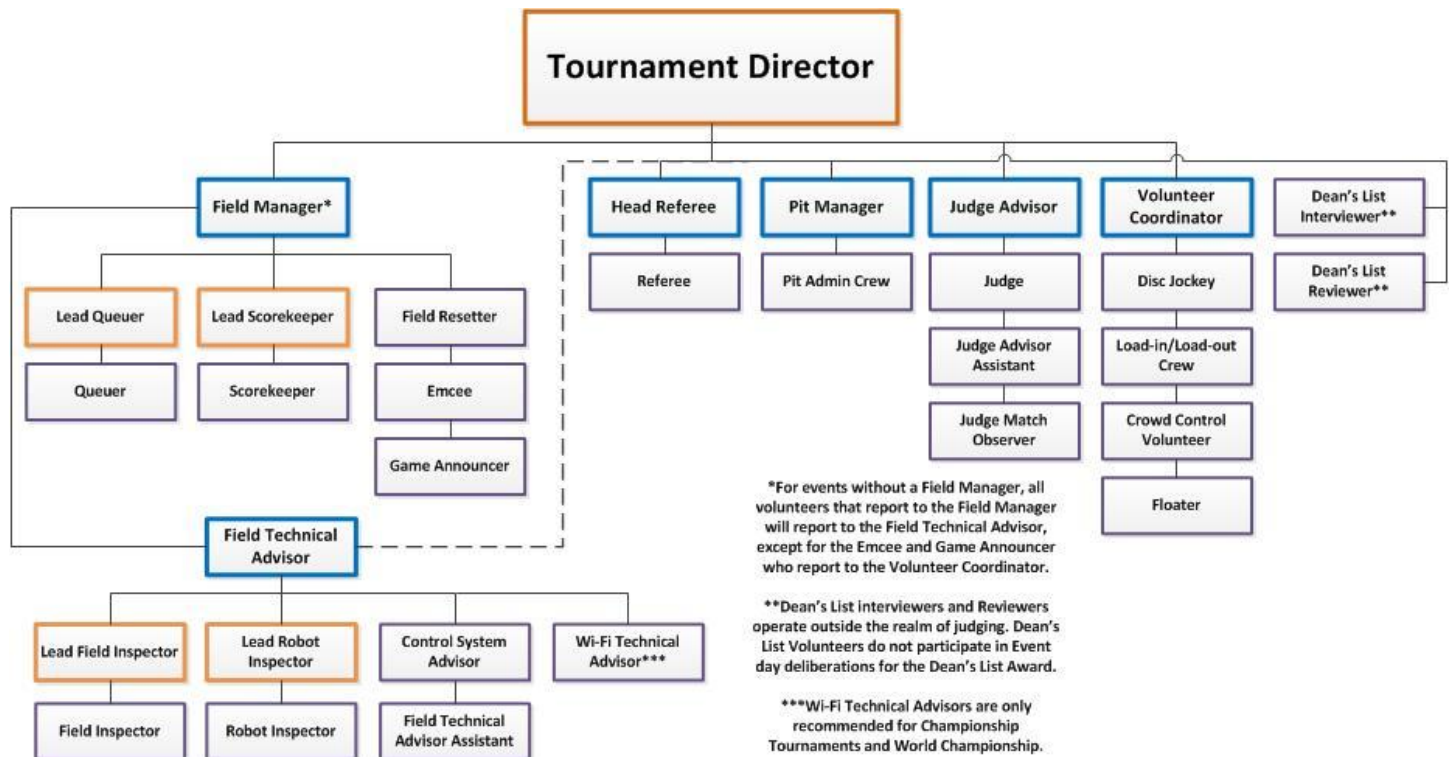

Figure 1 - League Championship, Qualifying Tournament, Championship Tournament Organization

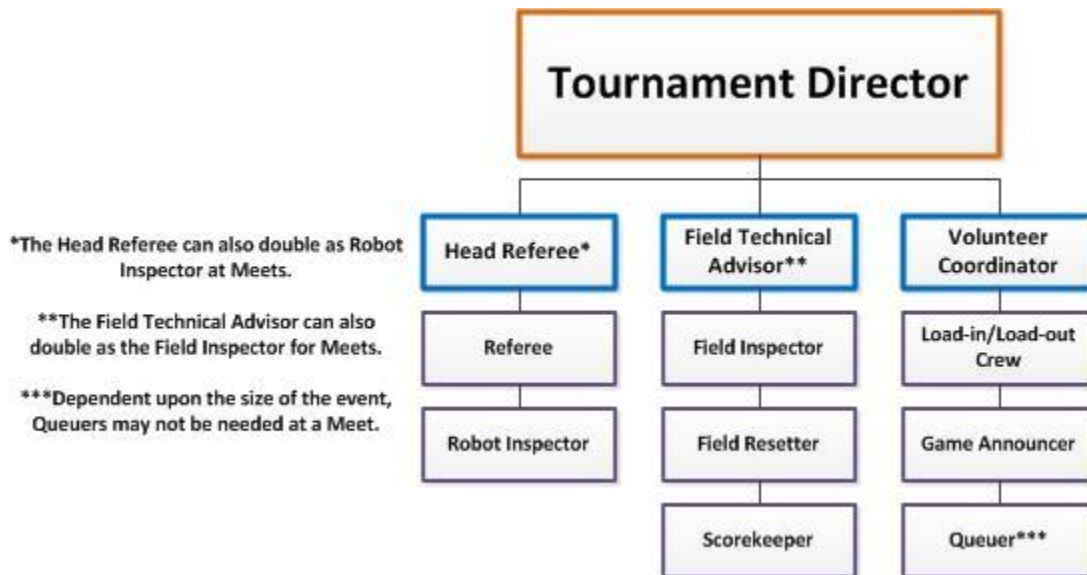

Figure 2 - League Meet Organization

Learn more about the roles of volunteers on our [Volunteer Resources page](#), "Volunteer Role Description".

## Job Description

---

### Introduction

The Field Technical Advisor (FTA) is the lead technical volunteer, an advocate for teams, and an advisor to the Head Referee. As such, an FTA should be someone with great people skills and the physical ability to spend most of the day walking, bending, and standing. The FTA does a lot of walking around the playing fields to diagnose issues, talk to teams, converse with the Scorekeepers, discuss problems with Referees, and help with event load-in and load-out.

The FTA is a key volunteer position that requires pre-event training and *FIRST* online certification. Anyone who can help to diagnose playing field or robot issues can serve in this role, however, a well-rounded FTA also needs to have the following knowledge/skills:

- Experience with the TETRIX® and REV Robotics® Design Systems;
- Knowledge of the *FIRST* Tech Challenge Android-based control system that is used to wirelessly control robots during a match;
- Familiarity with the *FIRST* Tech Challenge Match Scoring System;
- Familiarity with the *FIRST* Tech Challenge Match Timer Display;
- Experience with devices running the Android operating system;
- Experience/familiarity with computers running the Windows® 7/8/10, Mac OSX, and Linux operating systems;
- Experience with Wi-Fi and Wi-Fi Direct networking;
- Ability to use deductive reasoning to solve technical problems; and
- Ability to repair damage to the playing fields.

### Prerequisite for FTA Role

To serve as a Field Technical Advisor, in depth knowledge of the *FIRST* Tech Challenge Android based control system and diagnostic tools is required.

- **Physical/Technical Requirements:**
  - Technical – High
  - Physical – Medium
  - Administrative – Medium
  - Communication – High
- **Time commitment:**
  - Pre-Event Training – Approximately six to eight hours
  - Event Day – Approximately six to ten hours
- **Proper Dress:**
  - Wear comfortable, closed-toe and closed-back shoes, most of the day will be spent standing and walking between the Pit area and the competition fields.
  - ANSI Z87.1 certified safety glasses are required in both the competition area and the team pits.

### Volunteer Training and Certification

Volunteers must apply to their role using the [Volunteer Registration System](#). After the volunteer has applied to their role, *FIRST* Tech Challenge will send an email to the volunteer with access instructions to training and certifications (if applicable). Emails with access to the training and certifications will be sent within one business day from applying to the role. If you have applied for a role but have not received access to the training, please email [FTCTrainingSupport@firstinspires.org](mailto:FTCTrainingSupport@firstinspires.org).

FIRST Tech Challenge requires Field Technical Advisors to be trained and certified prior to volunteering in the role. Training, including reading the current year's Game Manual (Parts 1 and 2), reading the Field Technical Advisor Manual, watching the training video, participation in Monthly Key Role Discussion calls, and taking the FTA certification test will take approximately six to eight hours.

### **Related Technical Roles**

In addition to working with the Field Manager, the Field Technical Advisor will also work with the Control System Advisor (CSA) and the Wi-Fi Technical Advisor (WTA). The Field Technical Advisor will assume the responsibilities of the Control System Advisor and/or Wi-Fi Technical Advisor if these volunteer roles are not staffed. The Control System Advisor's responsibility is to provide complimentary, in-depth technical support at an event. If a Field Technical Advisor is working with a team and encounters a technical issue that requires in-depth troubleshooting, then the Field Technical Advisor should direct the team to visit the Control System Advisor for more extensive technical support.

The Wi-Fi Technical Advisor's responsibility is to conduct a pre-tournament Wi-Fi site survey and monitor, police, and troubleshoot the wireless environment during an event. If a Field Technical Advisor suspects that there is interference or malicious activity on the wireless spectrum that has the potential to disrupt an event, then the Field Technical Advisor should consult with the Wi-Fi Technical Advisor to troubleshoot and resolve the issue.

### **Volunteer Minimum Age Requirement**

FIRST requires that FIRST event volunteers be at least 13 years old, however, Regional Planning Committees may increase the age requirement as needed. Adult volunteers cannot have children with them while volunteering or be responsible for supervising children at the event. Children under the minimum volunteer age are welcome at FIRST competitions with suitable supervision by someone other than a volunteer.

### **Key Volunteer Role Minimum Age Requirement**

Key Volunteers MUST be at least 21 years old for FIRST Tech Challenge. Key Volunteer positions include: Volunteer Coordinator, Head Referee, Judge Advisor, Field Manager, Field Technical Advisor, Lead Robot Inspector, Lead Field Inspector, and Lead Scorekeeper. Local Affiliate Partners can make case by case exceptions to these guidelines by contacting FIRST for approval.

### **Bring a Friend!**

Volunteers are a huge part of the FIRST Tech Challenge Program and continuing to inspire students to seek out careers in science, technology, engineering, and math (STEM). FIRST Tech Challenge needs your help in recruiting new volunteers to keep our programs thriving for future generations! If you have a friend or co-worker you think would be interested in volunteering at an event, there are just a few easy steps to help get them involved!

1. Check out our full list of [volunteer opportunities](#) online!
2. Have them apply for the event in the [Volunteer Registration System](#). Volunteers must be screened before volunteering.
3. Have them contact [FTCTeams@firstinspires.org](mailto:FTCTeams@firstinspires.org) with any questions they may have.

If they are concerned about jumping in head first, no worries! Job shadowing at a FIRST Tech Challenge event is a great way to get a taste of what a full day's worth of competition looks like. New volunteers can discover ways they can fit their personal skills and interests into a volunteer position!

## Overview of Responsibilities

### Event Time Commitment

Most *FIRST* Tech Challenge events are whole-day events. In addition, FTAs might be asked to help set up the field prior to the event and participate in tear down after the event. Plan on one to three hours of time commitment in addition to the event day time commitment.

### Field Technical Advisor Safety

Dress for this role includes ANSI Z87.1 certified safety glasses or side shields on shatterproof prescription eyeglasses worn at all times on and around the Competition Playing Fields and in the pit areas. In addition, wear comfortable clothing that will allow you to move easily and closed-toed and closed-backed shoes that will provide all-day-on-your-feet comfort and will not harm the foam playing field floor covering.

## Pre-Event Day Responsibilities

It is important that prior to the event, the Field Technical Advisor (FTA) reviews the FTA Manual, watches the pre-recorded FTA training video, and reads the supporting documents listed in the checklist below. These training materials will help FTAs to pass the required *FIRST* FTA Certification test.

The training materials provide the technical knowledge needed to keep a competition running smoothly as well as FTA responsibilities at an event. Scheduled monthly key role discussion calls provide an opportunity to ask questions and share ideas and feedback with other FTAs. Learning ahead of time will go a long way towards keeping the event running smoothly and on time.

Mastering the *FIRST* Tech Challenge technology requires specialized study. The robot electronics and behaviors are unique to the *FIRST* Tech Challenge program and completing the pre-tournament checklist below will help the FTA prepare for their highly visible volunteer role and help assure a fun and successful tournament day. Information on how to access FTA training materials is provided in [Appendix A](#) of this document. The document names that are underlined are hyperlinks to public documents on the *FIRST* Tech Challenge website. The remaining documents are stored in the Schoology learning management system.

Outlined below are responsibilities an FTA has before event day. Make sure to check with the Tournament Director to see if they need help setting up before the event.

- Read this manual and complete all the checklists. Bring it to the competition for the technical element references it provides.
- Read the [Control System Troubleshooting Guide](#), which explains how to troubleshoot common problems with the *FIRST* Tech Challenge Android-based control system. An electronic or printed copy of this guide will be helpful on tournament day for the technical element references it provides.
- Read the *FIRST* Tech Challenge [Wi-Fi Event Guide](#) and [Wireless Event Checklist](#).
- Read the [Control System Advisor Manual](#) in the event you will also cover this important volunteer role.
- Read the [Wi-Fi Technical Advisor Manual](#) in the event you will also cover this important volunteer role.
- Read the *FIRST* Tech Challenge [Robot Wiring Guide](#).
- Watch the FTA Training video.

- Watch the official *FIRST* Tech Challenge instructional [Hardware Tutorial YouTube videos](#), which explain how to set up and configure the Android-based control system.
- Watch the *FIRST* Tech Challenge [REV Electronics Tutorials](#), and check out the [REV Robotics Expansion Hub Guide](#).
- Read the [Scorekeeper Manual and Scoring System Guide](#), which prepares the FTA to provide technical assistance to the Scorekeeper. You may find it beneficial to attend the Scorekeeper's training teleconference or listen to a recording of an earlier teleconference.
- Watch the [FIRST Tech Challenge Game Animation/Video](#). Focus on understanding what the teams are trying to accomplish during a match and the names of the playing field elements.
- Download the [Game Manual Part 1](#), paying special attention to *Section 4, The Tournament* to become familiar with the tournament terminology and structure. It would be beneficial to also read *Section 8* for the robot construction rules and the [Game Manual Part 2](#) to learn the game rules.
- Read the [Field Manager Manual](#) if you will also be serving in that capacity; otherwise a general perusal of that manual will be helpful.
- Participate in the monthly FTA Discussion Calls or listen to their recordings. The call schedule will be available in the Field Technical Advisor folder in Schoology, which can be accessed after applying for the role of FTA.
- Pass the online FTA Certification test.

The FTA should perform the following tasks prior to every event:

- Read the Field Tech Advisor Discussion Forum located in [Schoology](#) in the Field Technical Advisor folder. This is a discussion forum where volunteers can ask questions or share tips and best practices with one another. *FIRST* staff will respond to posts and also share tips and important technical information in this forum.
- Verify the technical volunteer staffing levels with the Volunteer Coordinator or Tournament Director. Each playing field should have one FTA and one FTA Assistant. An FTA Assistant Floater is recommended and can support up to two playing fields. All events should have at least one CSA to provide in-depth technical support to teams. Large events should have several CSAs. Very large events such as a championship tournament should have a WTA to oversee the wireless spectrum during the event.
- Verify with the Volunteer Coordinator that the Lead Robot Inspector and the Lead Field Inspector have the necessary materials and volunteer staffing for the event.
- A week prior to the event, check the [FIRST Tech Challenge Volunteer Resources](#) page to see if there are any updates to the Scoring System.
- The Wireless Technical Advisor (WTA) or Control System Advisor (CSA) should conduct a wireless survey of the venue to make sure the wireless environment is clear and that there are no Wi-Fi suppressors operating in the venue. The FTA will perform this task if a WTA or CSA is not available. Coordinate this activity and share the results with the Tournament Director. Use one or more pairs of Android devices to measure the ping time in different areas of the venue and on different Wi-Fi channels of the spectrum.
- Select preliminary Wi-Fi channels for the Wi-Fi Direct robot communications and any other Wi-Fi Access Points needed to run the event based on the Wi-Fi site survey of the venue. Share the channel recommendations with the Tournament Director and the Lead Field Inspector.

## Event Day Responsibilities

### ***Tournament Set-Up Day for the Field Technical Advisor***

- Dress for the day includes ANSI Z87.1 certified safety glasses or side shields on shatterproof prescription eyeglasses (required around the competition playing fields and in the pit areas), comfortable clothing that will allow you to move easily, and closed-toed and closed-backed shoes that will not harm the foam playing field floor covering.

*Gracious Professionalism®* - "Doing your best work while treating others with respect and kindness - It's what makes *FIRST*, first."

- Tournament set-up generally occurs on the day before the competition. Setting up the competition area and testing the wireless environment normally takes two to three hours for a single field event and three to four hours for a two-field event, although those times will decrease with experience. The FTA will work with the Field Manager (FM) and volunteers to set up the competition playing field(s) and the practice field(s). It is helpful to have a robot and control system, or at least a pair of Android devices running the *FIRST* Tech Challenge apps (*FIRST* Tech Challenge driver station and *FIRST* Tech Challenge Robot Controller) to test the wireless environment on the field. Once the playing fields are set up, the FM will verify that the fields are set up as instructed by the [AndyMark Field Assembly Guide](#) and the [AndyMark Field Setup Guide](#).
- Be sure to have all passwords of the computers or devices being used, if applicable.
- The Android-based robot control system does not require any centralized control infrastructure. Teams will bring their own driver stations and Robot Controllers to the event. However, if a Wi-Fi Technical Advisor (WTA) or Control System Advisor (CSA) is not available, the FTA should do a wireless survey, conduct wireless tests, and select candidate Wi-Fi channel(s) for teams to use during match play. This helps to avoid troubleshooting wireless issues immediately before an event. Feel free to use the telephone number in Appendix A to contact the on-call technical support person if there are any problems with the setup or the wireless spectrum on event day.
- Collaborate with the Scorekeeper to [set up](#) the match Timer Display.
- The Scorekeeper is usually responsible for setting up and testing the scoring computer and, if used, the real time scoring system electronics. The FTA should verify with the Scorekeeper that the Scoring System is set up and good to go.

### **Event Day for the Field Technical Advisor**

- Arrive early; the FTA should be one of the first volunteers to arrive on event day.
- Verify that the reserved wireless channels for the competition playing fields are clear and that low ping times are observed for a test Robot Controller-driver station pair operating on these channels. The WTA or CSA will perform this task if the event staffs these volunteer roles.
- Verify that the Lead Robot Inspector and Lead Field Inspector are good to go before the scheduled start of inspection. Periodically visit these volunteers while inspections are underway.
- Meet with the CSAs and WTAs to confirm their activity plans for the event.
- Assist with field inspection of the robots.
- Meet with the Head Referee prior to the Opening Ceremony to discuss the flow of match-to-match activities, the FTA's triage protocol for pre-match robot setup, Autonomous to Driver-Controlled robot transition, in-match issues, and post-match discovery. Assure the Head Referee that you will provide timely assistance to teams and that you will make the difficult call to start a match with a non-functioning robot after the recommended triage and remediation steps in the Control System Troubleshooting Guide have been performed. Sharing the FTA's triage protocol with the Head Referee will help the tournament day run smoother.
- Attend the opening ceremonies and be prepared to start the first match directly following the ceremony.
- The remainder of the day will be spent overseeing the technical volunteers around the competition playing field(s), assuring that the Wi-Fi channels are free from interference, and performing robot triage. The WTA and/or the CSA will assist with monitoring the Wi-Fi channels if these volunteer roles are staffed.
- Unexpected robot behavior will happen during the tournament. It is the FTA's responsibility to determine if a robot issue or an external issue like wireless interference caused the unexpected behavior. More detail is provided in the Dealing with Team Issues/Concerns section of this manual.

### **Suggested Event Day Equipment & Document List for the Field Technical Advisor**

- Safety glasses.

- Closed-toe and closed-back comfortable shoes (that will not damage the field).
- Small battery-powered flashlight or headlamp.
- Multifunction Voltmeter/Ammeter/Ohmmeter with probes.
- Needle nose pliers.
- Multi-bit screw driver (with various-sized Philips and slotted style bits).
- TETRIX-compatible tool kit.
  - TETRIX hex key set (Pitsco Part #W39104, sizes 7/64", 3/32", 5/64", and 1/16").
  - TETRIX Max wrench set (Pitsco Part #W38001)
- REV Robotics-compatible tool kit (REV Part #'s 41-1376, 41-1377, 41-1374, and 41-1119).
  - Metric hex key set (including 1.5mm and 2mm keys).
  - Metric 5.5mm nut driver.
  - Metric 5.5mm combination wrench.
- A pair of ZTE Speed (or other compatible) Android phones.
  - Current *FIRST* Tech Challenge driver station App installed on one phone.
  - Current *FIRST* Tech Challenge Robot Controller App installed on the other phone.
  - Current Channel Change App installed on Robot Controller phone (ZTE Speed only).
  - Wi-Fi Analyzer app (Available from the Google Play Store) installed on driver station phone.
- USB FLASH drive with current *FIRST* Tech Challenge apps (driver station, Robot Controller, and ZTE Speed Channel Change).
- Hardcopy or electronic copy of the FTA Manual.
- Hardcopy or electronic copy of the Control System Troubleshooting Guide.
- Hardcopy or electronic copy of the Wi-Fi Event Checklist.

### ***FTA and Head Referee Match Workflow***

New for the 2018-2019 season is the concept of playing field ownership by the FTA and Head Referee during the match workflow timeline. The key volunteer that owns the playing field is responsible for everything that occurs on the playing field. Specifying which key volunteer is in charge of the playing field and how field ownership transitions between these volunteers improves workflow efficiency. The recommended playing field ownership timeline is as follows:

- 1) The Head Referee owns the playing field starting when the FTA signals to the Head Referee that the drive teams and their robots are ready to start the match and ending when the referee crew signals to drive teams that they may remove their robots from the playing field. For example, the Head Referee owns the playing field during the following activities:
  - a) Randomization of the playing field elements.
  - b) Autonomous period.
  - c) Transition between the Autonomous and Driver-Controlled periods.
  - d) Driver-controlled period.
  - e) Post-match score certification.
  - f) Signaling drive teams to remove their robots from the playing field.
- 2) The FTA owns the playing field at all other times. For example, the FTA owns the playing field during the following activities:
  - a) Playing field reset.
  - b) Robot setup on the playing field by the drive teams.

Prior to the start of qualification matches, the FTA should meet with the Head Referee to confirm how they will work together across the match workflow timeline. The Head Referee should be familiar with the field ownership concept because it is described in the Referee manual.

### ***Pre-Match Responsibilities for the Field Technical Advisor***

The FTA and the Field Technical Assistant (FTAA) are responsible for verifying that the drive teams and their robots are ready for the start of all matches. FTAs and FTAA's should feel free to stand on the playing field

while drive teams are setting up their robots. This is the best location to assess status, provide immediate assistance, and project a clear visual indication that the FTA/FTAA has not released the playing field to the referee crew. As a team advocate, the FTA/FTAA should aid drive teams that are having technical difficulties and assure that a reasonable amount of time is devoted to performing the triage and remediation steps recommended in the Control System Troubleshooting Guide. Most control system connection problems can be resolved in two minutes or less. In extreme cases, a few extra minutes are required to power cycle the Android devices. If the recommended repair steps in the Control System Troubleshooting Guide and power cycling the Android devices do not solve the problem, the FTA will have to make the difficult decision to start the match with a non-functional robot.

A step-by-step guide to the recommended pre-match FTA/FTAA activities is as follows:

- 1) Perform as needed repairs to the playing field.
- 2) After drive teams arrive at the playing field, the FTA and FTAA will:
  - a) Focus on helping one alliance per FTA/FTAA and provide as needed support to the other alliance robots when appropriate.
  - b) Welcome the drive teams to the playing field from a position on the playing field floor.
  - c) drive teams may perform the optional robot wiggle test on their own.
  - d) Observe drive teams setting up their robots, gently redirect drive teams to the task at hand if they are distracted, and provide assistance when necessary. While the drive teams are making good progress towards setup, use your free time to give the robot a quick inspection to help the team have a successful match:
    - i) Look for entanglement issues or disconnected wires.
    - ii) Confirm that an alliance flag is securely attached to the robot.
    - iii) Verify that the robot controller and main robot battery are securely attached to the robot.
    - iv) When applicable to the game, confirm that the drive team has preloaded the allowed scoring elements.
  - e) Remind the drive teams to untangle their driver station cables as appropriate.
  - f) Observe the following information on the driver station after the drive team is finished setting up their robot. For the early matches, explain the items you are checking to the drive team. In later matches, most drive teams will have learned to perform these checks themselves, enabling them to correct issues before an FTA/FTAA finds them.
    - i) Confirm that the driver station is wirelessly connected to the robot controller.
    - ii) Confirm that the gamepads are registered in the driver station app.
    - iii) Check ping times.
    - iv) Verify that the robot main power is turned on.
    - v) Verify that an OpMode is selected.
    - vi) Verify that the 30 second stop timer is engaged if the drive team is running an Autonomous OpMode.
    - vii) Verify that the Init button has been pressed.
  - g) Signal to your FTA/FTAA partner when your alliance's robots are ready to start the match.
  - h) The FTA signals the Head Referee when the robots and drive teams are ready to start the match.

These FTA/FTAA pre-match setup activities help drive teams have a successful match and they can be performed within the desired match-to-match cycle times.

### **Robot Triage**

Once there is an issue on the playing field, the FTA/FTAA's role is to find out the problem and figure out the cause. An FTA/FTAA is like an investigative reporter, trying to find the facts before coming to a conclusion, and

then acting on what is found out. The [Control System Troubleshooting Guide](#) describes unexpected robot behaviors and their telling characteristics for proper diagnosis. This should help you learn more about the common problems and how to solve them. When problems arise, the FTA/FTAA should gather information by using the following guidelines:

***Before the start of Autonomous the Field Technical Advisor may:***

- Talk with members of the affected drive team.
- Recommend corrective action to the drive team.
- With permission, touch the team's robot, gamepad controllers, etc.
- Check the status of the robot by visual inspection of the robot, the robot controller, and the driver station.

***Transition from Autonomous to Driver-Controlled periods:***

Unexpected robot behavior may occur during the Autonomous period. The behavior could be caused by team error, robot interaction with other robots or field elements, or by events that are not the responsibility of the team. Problems caused by team error, or interaction with robots or field elements will not be repaired until the robot is released to the team after the conclusion of the match (i.e. end of the driver-controlled period.)

Examples of problems caused by team error are:

- Loose power wires.
- Loose or disconnected cables.
- Broken chain or tread.
- Low or dead battery.

The FTA and team should not repair the problems listed above, any other team-created issue, or robot interaction issue during the transition between the autonomous and driver-controlled periods. Rule <G11> in the Game Manual Part 2 addresses the autonomous to driver-controlled period transition.

**<G11> Autonomous to Driver-Controlled Period Transition** – At the conclusion of the Autonomous Period, robots will remain in a hands-off state. Field personnel will not enter the field and will not touch robots on the field during the Autonomous to Driver-Controlled transition. Drive Teams will have 5 seconds to pick up their Driver Station. The scoring system display will provide visual and audio cues for Drive Teams to pick up their Driver Stations. After the 5 seconds, there will be a 3-2-1 countdown and the Driver Controlled period of the Match will begin.

***During autonomous or driver-controller periods the Field Technical Advisor may:***

- Talk with members of the affected drive team.
- Recommend corrective action to the drive team.
- With permission, touch the team's gamepads.
- Check the status of the robot with the team's driver station display.
- Look at the robot while remaining outside the playing field walls.
- Turn off robot power if the robot has lost communication with its driver station and is at risk for burning out a motor or causing damage to the playing field or other robots. Perform this action only if it can be done safely.

***During autonomous or driver-controller periods the Field Technical Advisor may NOT:***

- Enter the playing field.
- Touch a robot, unless the robot is out of control of the driver station and is likely to cause damage to the playing field, people, other robots, or itself. This action should be performed only if it can be done safely.

Exceptions to entering the playing field occur during dangerous conditions on the playing field such as a robot on fire or a robot that has lost communication with the driver station and it is a danger to teams, volunteers, spectators, itself, other robots, or playing field elements, etc.

Robot triage is limited to what the FTA can see on the driver station display, observe about the robot, and see on the robot controller display or log files. Consult the Control System Troubleshooting Guide for details on how to use these tools to troubleshoot a problematic robot.

The FTA may need to investigate unexpected robot behavior at the end of a match while robots are on the playing field. Robots that lose the communication link with their respective driver station may continue to move after the conclusion of the match. When this occurs, turn off the robot's main power switch as soon as possible to avoid damaging robots or the playing field elements. When entering the playing field, be careful not to affect match scoring by moving robots and scoring elements.

### ***Robot Wiggle Test (Optional)***

Teams may, at their discretion, perform a robot wiggle test prior to the start of the autonomous period to verify that the drive team is able to control their robot. Identifying problems before the start of a match period allows the FTA/FTAA to perform triage on the robot before starting the period of play.

During pre-match setup, the robot wiggle test is performed by teams on the playing field by running a driver-controlled OpMode and using a gamepad to slightly move a servo or DC motor. Controlled servo or DC motor motion confirms that the driver station is communicating with the robot controller Android device and the controller subsystem is operational. After a successful wiggle test, the drive team sets up their robot as usual for the autonomous period. The robot wiggle test is not a coordinated test with all of the teams participating together; drive teams may perform the test as part of their normal set up procedure.

### ***Android Device Software Settings Viewer***

The robot Field Inspection Helper code<sup>1</sup> is integrated into the driver station and robot controller apps. This feature displays the status of all the required Android device software settings on a single screen. This enables an FTA/FTAA to quickly check the status of the software settings that are important to the successful operation of a FIRST Tech Challenge robot. The software inspection function is accessible from the dropdown menu in the driver station and robot controller apps. The driver station can remotely view the robot controller's software inspection status while the two Android devices are connected via Wi-Fi Direct.

### ***Match Replays***

The most important role of the FTA is correctly diagnosing the problem and working with the Head Referee to determine if the issue will cause the match to be replayed. Matches should be replayed if the issue or malfunction can be **absolutely traced back to excessive wireless interference**. Issues caused by the team's robot do not warrant a match replay.

Since the match replay is oftentimes what the teams are most concerned about, the FTA needs to be on hand to explain the situation to the teams, including why the problem happened and how they can fix it for the next match.

Rule <G26> in the Game Manual Part 2 addresses match replays:

**<G26> Match Replay** – Matches are replayed at the discretion of the Head Referee only for a failure of a non-team supplied game element or verified Wi-Fi interference that was likely to have impacted the outcome of the match.

<sup>1</sup> Adapted from the "Robot Inspection for FTC" app developed by Team HazMat: FTC 9227 and 10650.

Unexpected robot behavior will not result in a match replay. Team-induced failures, such as low battery conditions, processor sleep time-outs, robot mechanical/electrical/software/communication failures, etc. are NOT valid justifications for a replaying of a match.

If a match does need to be replayed, the FTA must present his/her case to the Head Referee as soon as possible. The Head Referee will make a final decision on the replay of the match.

### **Non-Allowed Wi-Fi Communication**

Rule <T4> can be located in the [Game Manual Part 1](#). It is important for the FTA to read and understand this rule and how to interpret potential violations.

<T4> No Team, Team Member, or tournament attendee is allowed to set up their own Wi-Fi 802.11 (2.4GHz or 5GHz) wireless communication in the venue. Non-allowed wireless communications include, but are not limited to:

- a. Cellular hot spots (for example, cell phones, tablets, MiFi).
- b. Ad-hoc networks.
- c. Nintendo DS peer-to-peer.
- d. Bluetooth communication with Robots in the Competition Area.

No Team, Team Member, or tournament attendee shall interfere with a Team's Wi-Fi Direct® communication with their own Robot.

The Penalty for violating rule <T4> is disqualification of the entire Team from the tournament and their removal from the venue property. Teams may not appeal the penalty and no refunds will be given for registration fees, prepaid meals, etc. *FIRST* may conduct a post-tournament review and decide if any added penalties will be imposed on the offending Team.

Teams are encouraged to report wireless security vulnerabilities to the Field Technical Advisor (FTA) at a tournament. Teams should always keep in mind Gracious Professionalism®, and therefore only report valid and verifiable violations of this rule. After the Field Technical Advisor is alerted of a potential rule violation, he or she will confer with the Head Referee. The Field Technical Advisor and Head Referee will further explore the potential violation of this rule. The Head Referee will work with *FIRST* Headquarters staff to determine if rule <T4> has been violated, and to disqualify the offending Team.

### **<T4> Rule Interpretation**

The Head Referee will work with the FTA, CSA, and WTA to determine the cause of any un-allowed Wi-Fi communications and to determine if the rule has been violated. Locating the source is an important step when notified of a possible violation of this rule. There are times when an audience member could inadvertently violate this rule, without knowledge or intent to cause harm. It is important for the FTA, WTA, CSA, and the Head Referee to evaluate the situation and to conclude whether or not the interference was intentional. The final determination to disqualify a team or not will rest with the Head Referee with the guidance of *FIRST* Headquarters staff if the Head Referee's recommendation is to disqualify the offending team.

### **<T4> & <T5> Rule and the Robot Controller Hosted Development Tools**

The *FIRST* Tech Challenge Blocks Programming Development Tool and *FIRST* Tech Challenge OnBot Java Programming Tool lets teams use a web browser to edit their op modes directly on the robot controller. The tool is hosted by the robot controller and it requires that a team connect their laptop to the robot controller's Wi-Fi Direct network. This Wi-Fi Direct network is the *same* wireless network that the driver station uses to

communicate with the robot controller. The use of the *FIRST* Tech Challenge Blocks Programming Development Tool or *FIRST* Tech Challenge OnBot Java Programming Tool does not violate rule <T4> or <T5> as long as this is done in the pit area, and not the competition area.

### Scoring System

At some events, Scorekeepers are responsible for setting up, testing, and operating the Scoring System. This may also be the responsibility of the Tournament Director, Technical Director, or Field Manager. The scoring software should be pre-loaded with teams and tested at least a week prior to the competition. The Scoring System should be tested again during load-in and the morning of the competition. The FTA should verify that the Lead Scorekeeper successfully completed these pre-competition tests and that the system is good to go the morning of the competition. The Scorekeeper(s) may encounter issues during the competition requiring the FTA's assistance. Prepare for competition day by reading the [Scorekeeper Manual and Scoring System Guide](#). A week prior to the event, check the [FIRST Tech Challenge Volunteer Resources](#) page to see if there are any updates to the Scoring System.

## Dealing with Team Issues/Concerns

One of the Field Technical Advisor's (FTA) responsibilities is to determine if unexpected robot behavior is caused by a problem with the Android-based control system, robot, or the Wi-Fi environment. Notify the Head Referee and the affected team(s) once the source of the problem is identified. When robot error is the cause of the unexpected match behavior, it is very important that the FTA or FTA Assistant explain to the drive team exactly what caused the problem and if time permits, suggest a course of action to fix the robot. Spending a few minutes helping a team will make a huge difference in the team's event experience. It is best to identify the source of the problem, share your findings with the team, listen to the team's feedback, and then move on

to the next match. If the team needs additional troubleshooting help, direct them to the event's Control System Advisor (CSA) if one is available or recommend that the team seek help from veteran teams in the pit area.

FTAs and FTAsAs will encounter a variety of issues on and around the competition playing field. A few common scenarios are described below:

**Tournament rule violation:** A student member of the drive team is not wearing safety glasses in the competition area.

Making eye contact with the student, smiling, and tapping a finger to your safety glasses is a friendly and effective way to keep the student safe and in compliance with the rules. Non-verbal cues are a great alternative to using an elevated voice that can be heard over a noisy environment.

**Repairing a robot in the competition area:** A drive team is making last minute repairs to their robot in the queue or on the playing field:

Quietly observe the action to assess the situation before asking the least busy student about their robot's status. As an advocate for teams in need, offer your assistance and advise the drive team on how much time is available before they need to leave the queue or be prepared to start the match. Be as generous as possible with their allowed repair time. Teams put a large amount of time and effort into building their robot to play just five or six matches at an event. Allowing a team to spend a little extra time to fix their robot is often the right course of action. Remember, the match schedule is a guide, not a guarantee. Balancing the needs of a team with a broken robot with the goal of running an event on time is a common dilemma for an FTA.

**Distracted drive team during pre-match set up:** A drive team is strategizing with their alliance partner when they should be setting up their robot for a match.

Move close to the drive team to get their attention and gently guide them towards setting up their robot for the match. After the robot is ready for the match, suggest that a better time for planning the alliance's match strategy is while they are in the pit area or queue.

There will probably be a scoring dispute or a field issue that a team may have during your event. The FTA's job is a fact-finder and robot repair expert, not a person to answer feedback and take complaints. There are ways to present your issues to a team that helps them to solve their issue or accept a ruling that can make your life easier and make the team feel that you are truly there to help them solve their problem. Simply listening to a team's issue is often what is needed to smooth over a situation.

***Common questions asked by teams and suggested responses are shown below:***

**Q1:** Why aren't you going to replay that match?

**A1:** *There are only certain situations that warrant replaying a match. Unless we can prove that it was a field fault or Wi-Fi interference, we cannot replay a match.*

**Q2:** Why did you replay a match for someone else, but not us?

**A2:** *Explain the team's situation versus the other situation. How were they different?*

**Q3:** Why won't you fix that score? We have video (or photographs) to prove the score is wrong! (This is not a question for the FTA to answer. Scoring questions should always be deferred to the Head Referee).

**A3:** *Direct the team to the question box so that they can discuss this issue with the Head Referee. Note that referees cannot accept video replay as per Section 4.3, Rule <T3>, a - The Referees may not review any recorded match plays or pictures.*

**Q4:** Why don't you fix/cleanup the wireless environment? It's obvious that the wireless environment is disruptive and causing disconnects.

**A4:** *We have been monitoring the field's wireless channel throughout the day and then state the relevant facts about the wireless environment for the tournament.*

**Q5:** The Score Tracker recorded our match wrong or the Scorekeeper entered the wrong score into the computer.

**A5:** This is not a question for the FTA to answer. Scoring questions should always be deferred to the Head Referee. *Teams may formally protest a match for a period of time not to exceed three matches following the match in question. If a team wants to dispute a score, one student representative should wait patiently in the designated question box area for the Head Referee (do not interrupt matches for this conversation). If the Score Trackers agree that they made a mistake, they can correct it. If the Score Trackers are confident in their score, the team should accept that decision.*

## End of the Day

---

At the end of the day, walk away from the event knowing you have done your absolute best to be an exemplary role model and ensure that the competition was fair for all teams. These are the ultimate goals of the Field Technical Advisor position.
